

ROBERT T. “BOB” WARNER

Executive Vice President Experimental Aircraft Association

Bob is the Executive Vice President for the Experimental Aircraft Association (EAA). He oversees the day-to-day management of EAA staff responsible for major EAA activities and services, including field-based, volunteer-accomplished programs for recreational flyers and aviation enthusiasts. In that role, Bob serves as a liaison with lawmakers and regulatory officials at the federal, state and local levels. He also oversees EAA’s membership services, Chapter services, aviation web content and aircraft builder education programs, as well as management and oversight of EAA’s three Divisions and the affiliated National Association of Flight Instructors (NAFI). Bob works closely with other aviation organizations in Washington, D.C., and around the world.

Prior to joining EAA, Bob was Executive Vice President of the National Association of State Aviation Officials (NASAO) for seven years. There he implemented a number of education programs for state and local officials as well as generated a number of research papers on state aviation efforts. From 1970 to 1985, he was with the Aircraft Owners and Pilots Association (AOPA). His role at AOPA began as a cooperative education student and eventually led to his position as Senior Vice President of Government and Public Affairs.

Bob holds a degree in aviation management from Auburn University. He trained at the National Transportation Safety Board’s Aircraft Accident Investigation School. He has also completed Association Management training at the University of North Carolina and executive development training at the Wharton School.

A 3,000-hour commercial pilot with instrument and seaplane ratings, Bob enjoys owning and flying a custom-built RV-6A and has a rare 1948 Aeronca Sedan waiting to be restored.

Bob and his wife, Noel Marshall, and their “flying dog,” Reggie, reside near Omro, Wis.
